SUMMARY

Fullstack developer with 5+ years of experience in technology, specialized in React, Next.js, Node.js and TypeScript. Currently at Zig — a leading live-entertainment technology company in Brazil — through Cubos Tecnologia, building solutions for large events and high-volume operations. End-to-end experience: from Figma prototypes to AWS/Vercel deployments, with testing, CI/CD and observability (Datadog, Grafana). More than a dozen websites and systems shipped to production as a freelancer.

EXPERIENCE

Mid-level Fullstack Developer — Cubos Tecnologia (allocated to Zig) May 2025 — present
Zig is a leading live-entertainment technology company: large events, arenas and high-volume operations. Worked in the Payments tribe and currently in the Internal Products tribe.

- Migrated the product's entire backend to accept Brazil's new alphanumeric CNPJ (company tax ID) — a cross-cutting change to validations, data models and integrations, without interrupting live operations.
- Built features and interfaces with React and TypeScript, following the design system and Figma prototypes.
- Developed APIs, integrations and services with Node.js, consuming internal and external APIs.
- Monitoring and observability with Datadog and Grafana; solid versioning, code review and code quality practices.

Junior Front End Developer — SmartBreeder Sep 2024 — May 2025
• Built new screens for the company's system with ReactJS from Figma prototypes, following the product's design system.
• Reusable components and API integration/consumption.

Junior Full Stack Developer — TBrWeb Jul 2022 — Aug 2024
• Modern, responsive websites and systems with React, Next.js, Node.js and Tailwind, with custom layouts per client.
• API integrations, backend and frontend development.
• Full deployment: AWS server setup and domain/subdomain configuration.

Help Desk Technical Support (intern → full-time) — TBrWeb Jun 2021 — Jul 2022
• Technical support and troubleshooting; hired full-time within 6 months and promoted to the development team.

SELECTED PROJECTS

- **Pira Turismo** — SaaS travel marketplace platform (B2B/B2C) with online booking. NestJS + Next.js 15 + Prisma/PostgreSQL monorepo, with self-hosted observability (Grafana, Loki, Pino), healthchecks and CI/CD deploying to a VPS. Own product, in production. (piraturismo.com.br)
- **Grazy Modas** — e-commerce with a custom admin panel (Next.js 16, Prisma 7, Auth.js v5), Sentry across client/server/edge and 30+ Vitest tests.
- **Construtor Brandão** — business website with embedded Payload CMS (Next.js 16, Tailwind v4, Neon, Firebase Storage).
- **PiraWebSites** — my website-building brand (pirawebsites.com.br): 10+ websites and systems in production, WhatsApp lead funnel and local SEO for 18 cities — full portfolio at gribeiro.dev.

SKILLS

Frontend	React, Next.js, TypeScript, JavaScript, TailwindCSS, React Query, Styled Components
Backend	Node.js, NestJS, Prisma, PostgreSQL, REST APIs
DevOps & Cloud	Docker, AWS, Vercel, CI/CD
Observability	Datadog, Grafana, Loki, Pino, Sentry
Quality & Tools	Automated testing, Git/GitHub, Figma, Insomnia/Postman

EDUCATION

Computer Engineering — Univesp 2022–2027 (in progress)
B.Sc. in Information Technology — Univesp 2022–2025
Technical Degree in Informatics — IFSP 2018–2021

LANGUAGES

Portuguese (native) · English (basic, improving)
